## SUMMARY

Discover Operations Manager specializing in technical live operations for large-scale gaming platforms. Mid-level professional driving end-to-end content publishing, release coordination, and performance optimization. Delivered 35+ monthly Fortnite Discover updates, supported 50+ annual release cycles, and managed 200+ content surfaces, achieving a 40% boost in content performance and cutting monitoring effort by up to 40% through automated dashboards. Seeking to leverage live-ops expertise to accelerate player engagement and operational efficiency for next-generation gaming experiences.

## EXPERIENCE

### Epic Games (Fortnite) | *Discover Operations Manager - Operator*

Aug 2025 - Present

- Own end-to-end configuration, validation, scheduling, and production publishing for 35+ monthly Fortnite Discover updates using internal CMS tools, Databricks, SQL, and OpenSearch, ensuring accurate and on-time releases.
- Manage and optimize 200+ Discover surfaces, panels, and game collections, improving content performance and operational efficiency by 40% through placement analysis, testing, and configuration optimization.
- Support 50+ annual release and certification cycles, partnering with Producers, QA, and cross-functional teams to launch new islands, features, and Discover content accurately and on schedule.
- Build and enhance internal tools for Fortnite Discover and Search, streamlining operational workflows, improving content discoverability, and enabling data-driven decision-making.
- Built two Grafana dashboards for surface- and row-health monitoring, reducing manual monitoring and issue-investigation time by 30–40%.
- Design and analyze A/B tests in Databricks using SQL and Statsig, then translate performance metrics into actionable recommendations that improve content placement, product features, and player-engagement strategies, leading to higher player retention
- Tested and validated 5+ internal product and marketing tools using Tableau dashboards and CMS, identified defects, and recommended workflow and usability improvements that reduced issue-resolution time by 15%
- Standardized validation and publishing workflows, reducing configuration-to-production delivery time by 25%, and audited data-transfer processes to lower costs by 6%.

### Amazon Web Services (AWS) - Marketing Data Science & Engineering | *Senior Business Analyst*

Feb 2025 - Jul 2025

- Architected product requirements for an internal marketing intelligence portal through 20+ stakeholder interviews, reducing data access time by 40% and improving cross-team collaboration
- Developed user personas and journey maps for 4 stakeholder archetypes (Data Scientist, Analytics Manager, Customer Research Analyst, Product Manager), enabling targeted solution design
- Accelerated portal wireframe delivery by 3 months through data-driven feature prioritization informed by UX research and pain-point analysis
- Mapped UI/UX workflows and identified critical friction points, contributing to a 30% improvement in projected user satisfaction scores

### Easley-Dunn Productions | *Software Engineer, Game Analytics*

Oct 2024 - Feb 2025

- Engineered a real-time analytics dashboard using Looker Studio and BigQuery with DAU/MAU tracking and cohort analysis, driving a 25% improvement in feature adoption decisions across a 5,000+ player base
- Built end-to-end data pipeline using Unity SDK and Firebase with custom event tracking, reducing gameplay adjustment response time by 40%
- Increased player retention from 60% to 80% through A/B testing and player segmentation; established automated churn prediction system to proactively surface at-risk cohorts

### Defence Research and Development Organisation (DRDO) - IRDE Labs | *Data Scientist (Intern)*

Jun 2020 - Oct 2020

- Built a real-time video enhancement system using TensorFlow (Subpixel CNN, Denoising Autoencoders), achieving 70% improvement in clarity of turbulence-affected surveillance footage and reducing inference time by 40% via optical flow estimation and multi-frame fusion
- Engineered and optimized a Python, OpenCV, and MongoDB machine-learning pipeline that processed over 3.5 million images and produced analysis-ready data for atmospheric turbulence mitigation, completing the project ahead of schedule

## Projects

### Wattpath - Demand side energy scheduling - Python, FastAPI, Grok SpaceXAI

2026 - Present

- Built a constraint-aware scheduler that shifts flexible compute and industrial loads into cheaper, cleaner grid windows under power-cap, deadline, and SLA constraints - beating a start-now baseline by 21% cost and 15% carbon with zero deadline misses
- Built a constraint-aware scheduler that shifts flexible compute and industrial loads into cheaper, cleaner grid windows under power-cap, deadline, and SLA constraints - beating a start-now baseline by 21% cost and 15% carbon with zero deadline misses

## EDUCATION

University of Southern California | *M.S., Applied Data Science*

Los Angeles, CA Aug 2022 - May 2024

SRM University | *B.Tech., Computer Science and Engineering*

Jan 2018 - May 2022

## SKILLS

- **Live Operations & Content Systems:** Live Content Operations, Cross-functional Program Coordination, A/B Testing & Experimentation, IP Certification, Content Programming, Release Management, Stakeholder Management, Requirements Gathering
- **Data & Analytics:** SQL, OpenSearch, Databricks, Grafana, BigQuery, Looker Studio, AWS QuickSight, AWS Redshift, Apache Airflow, Firebase
- **Engineering & ML:** Python, TensorFlow, OpenCV, MongoDB, Unity SDK, Unreal Services
- **Tools:** JIRA, Confluence, Claude AI, Internal CMS Tooling
